### Product description

This beautifully designed chess board has touch sensors that effortlessly register your moves.

It has a rechargeable battery, e-Paper display, intuitive settings in many languages and weighted plastic chess pieces. The computer moves are indicated by unique circular LED lights.

Its greatest feature is the adaptive intelligent chess program that automatically adjusts itself to your playing strength so that you will always have a suitable playing partner.

Stop using computer screens, tablets or telephones and start playing chess with Centaur on a real board with real chess pieces. Simply turn it on and make your move! Centaur is always there to challenge you, to help develop your game and to keep you sharp!

Other chess computers are made to play at the highest strength. They are impossible to beat. At lower levels they play unnatural and unhuman. They are simply no fun to play against.

Centaur was made to give everyone a good game. Whether you are a beginner or a strong player, whether you are a home player or a club player, Centaur will adjust to you as soon as you make your first move. Its smart algorithm will automatically adjust to your level and always gives you a challenging game that is both educative and great fun! It has a hint system and the option to set up any position.

Centaur is not compatible to connect to your computer or online chess portals. That is not necessary at all, use the Centaur to play, to learn, to train, to analyze and to improve your skill level. Above all, use it to have fun!

Technical specifications:
